Applicant											
EUROPEAN ORGANIZATION FOR NUCLEAR RESEARCH CERN											
This International Search Report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.											
This International Search Report consists	of a total of4 sheets.										
It is also accompanied by a copy of each prior art document cited in this report.											
Basis of the report											
 With regard to the language, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item. 											
the international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).											
b. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international search											
was carried out on the basis of the sequence listing : contained in the international application in written form.											
filed together with the international application in computer readable form.											
furnished subsequently to	furnished subsequently to this Authority in written form.										
furnished subsequently to	this Authority in computer readble form.

Box III TEXT OF THE ABSTRACT (Continuation of item 5 of the first sheet)

The invention refers to a sample device to be inserted inside an external tube, having a substantially circular cross-section, and carrying a substantially circular plate as part of a turntable (4) to be rotated within the external tube(3) a round two substantially othogonal axes. Two substantially coaxial tubes(3,2), with the turntable being supported by the outer tube(3), and two meshing gears(30, 20), with the first gear(20) being connected to the inner tube (2) and the second gear(30) being connected to the turntable(4), and/or a special cable guide(5) being connected with its first end with the turntable (4) and its second end, being substantially perpendicular to the first end, with the sup-porting means, with the inner tube(2), the outer tube (3) and/or the cable guide(5) being connected with a driving unit, are provided for maximizing the surface of the plate to be rotated within the external tube.

Form PCT/ISA/210 (continuation of first sheet (2)) (July 1998)
